

DUALINK™ DELTA ULTRA

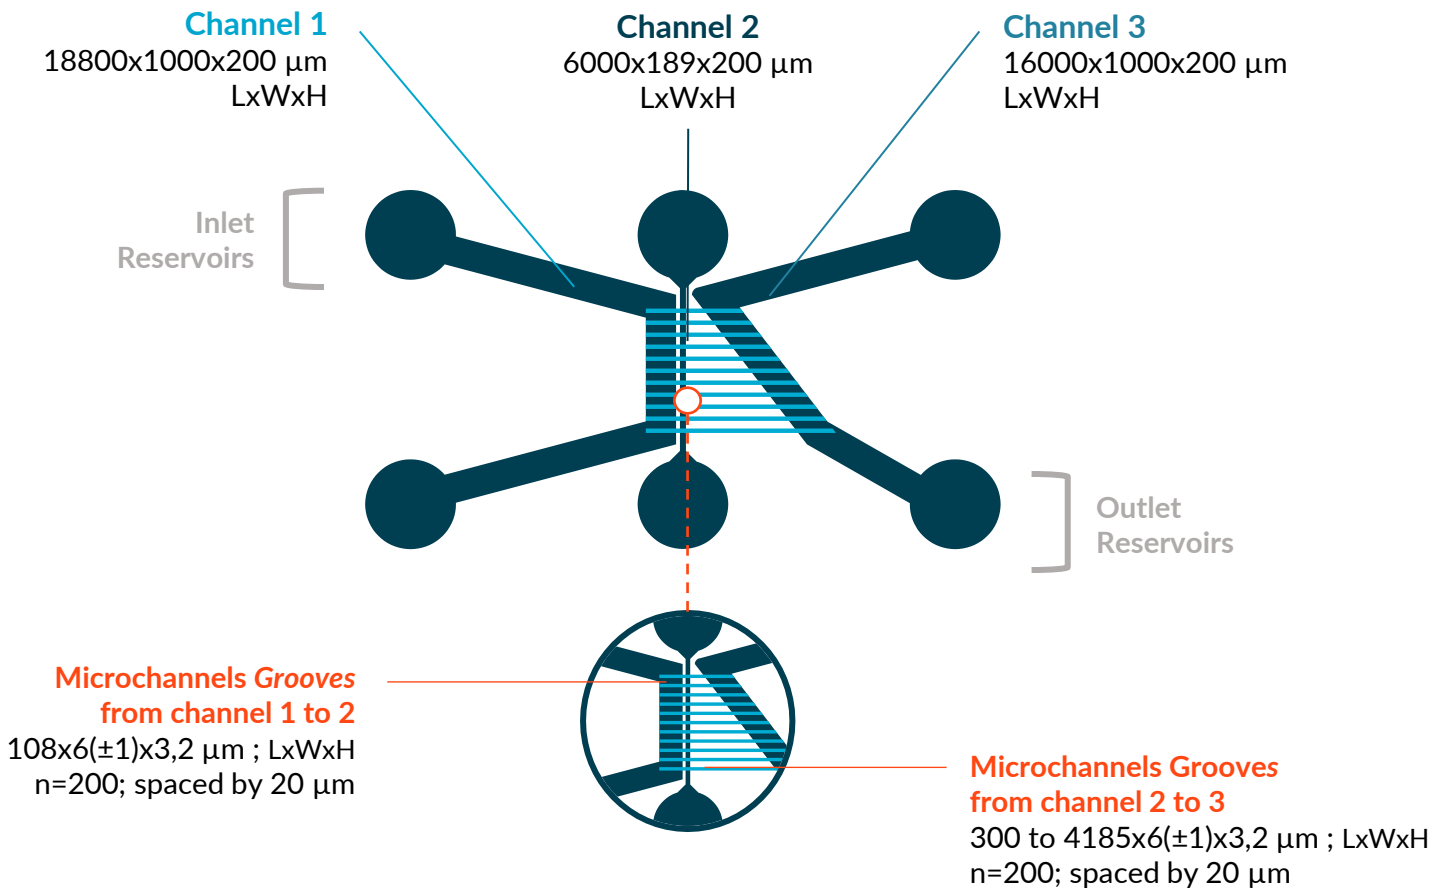

The DuaLink™ Delta Ultra is a 3-compartments chip, with a triangular shape, connected by microchannels *grooves* technology of different length, that allow continuous connectivity and growth kinetics.

2 compartments for cell culture and 1 for growth kinetic.

Due to their micron scale, only cell extensions can grow within the microchannels, leaving the cell bodies within the compartments themselves.

TECHNICAL SPECIFICATIONS

Surface Area

Channel 1
18.8 mm² (32.9 mm² with reservoirs)
Channel 2
1.13 mm² (15.26 mm² with reservoirs)
Channel 3
16 mm² (30.13 mm² with reservoirs)

Volumes

Channel 1
3.8 μL (117.7 μL with reservoirs)
Channel 2
0.2 μL (114.1 μL with reservoirs)
Channel 3
3.2 μL (117.1 μL with reservoirs)

Formats

Microfluidic chip
3x2 wells
QuarterBentos™
4 chips
(52,6x34,6x6,2)
NeoBento™
SLAS standard 96-well plate
(127,8x85,5x17,1 mm)

Materials

Microfluidic chip
PolyDiMethylSiloxane
biocompatible and low compound absorbing
(layer 170 μm thick + refractive index: 1.4)
NeoBento™
Polystyrene (1.4 mm thick + refractive index: 1.59)

DUALINK™ DELTA ULTRA

APPLICATIONS

Neurological applications

- Growth kinetics quantification
- Axonal regeneration visualization and quantification
- Co-culture (in the same compartment, like Schwann cells/sensory neurons or astrocyte cells/motor neurons...)
- Embryology
- Axotomy
- Peripheral pain
- Motor neuron diseases (Amyotrophic Lateral Sclerosis, Spinal muscular atrophy...)
- Neuroinflammation (Multiple sclerosis, Cerebral tumors...)

And more...

READOUTS

- Lysis Cell Analysis (LC / MS)
- Live Dead Assays
- Live Staining
- ImmunoFluorescence
- ELISA Active Biomarkers
- Calcium Imaging
- Human cells (apparently healthy, diseased, engineered...)
- Rodent cells
