

## Team manager biology

NETRI is an industrial start-up developing innovative technologies for the pharmaceutical industry. In everything NETRI does, it believes in challenging the way we discover new treatments. NETRI uses neural activity at the network level to translate mode of action of any drugs. NETRI designs, manufactures and sells standardized neuro organsoids-on-a-chip. Its patented organs-on-chip technologies allow the creation of standardized and predictive human in vitro models. This allows to anticipate the efficacy of an innovative treatment, to accelerate preclinical research phases, and to reposition compounds on new indications, while limiting animal testing. The use of human neural circuits coupled with multiple cell types opens the way to more personalized medicine as well as faster and more relevant diagnostics. Current application areas include neurological disorders, dermo-cosmetics and toxicology.

### Description

We are looking for a senior R&D scientist willing to share his/her time between team management and scientific involvement on our projects.

The development of the biology laboratory (6 people) leads us to look for a team leader. He/She will manage a team of scientists with the following main missions:

- Manage and co-ordinate day-to-day activities within the service,
- Management of teams and individuals,
- Establish and maintain effective communication,
- Ensure good practice within services.

In parallel to his/her missions of team leader, he/she will be able to bring scientific and technical expertise to various product development projects. Our main projects involve pain disorders (and more particularly peripheral pain) and cell interactions of epithelial or mucosal type and particularly the skin innervation. All these projects include the recording of neuronal activity thanks to Multi Electrode Array (MEA) techniques. Your main missions will be:

- Participate in the elaboration of project study plans in collaboration with the technical and commercial teams,
- Participate in the implementation of the project with the project management teams,
- Participate in the analysis and interpretation of the results and participate in the writing of the technical deliverables of the projects,
- Participate in the drafting of dissemination documents,
- Conduct literature searches to adapt/develop protocols,

### Profile sought

- Able to participate in multiple projects in parallel and interact with our multidisciplinary teams on a daily basis.
- Are you agile, passionate and daring? You like to work in a team and share your knowledge?
- Do you want to join an industrial startup with an innovative project that makes sense?

***You are surely the person we are looking for, join the NETRI adventure!***
